LEGION ARAMID (AFS)

Protect your property, personnel and assets

- ▶ VEHICLE PROTECTION
- ▶ PROPERTY PROTECTION

ASL's Legion Aramid, or Aramid Flat Sheet Armour (AFS), are designed to protect property and personnel from ballistic attack. They are a lower cost alternative to Polyethylene panels and are lighter than mild steel or GRP Armour.

AFS Armour is predominately used for the manufacturing of Ballistic Spall Liners.

ASL Spall Liners are mounted on the inside of the vehicle or structure and are designed to encapsulate the impacting projectile through controlled de-lamination and energy absorption, thereby eliminating the typical ricochet that is inherent in hardened steel armours.

The standard panel size is 3000 x 2000mm but larger panels can be accommodated.

FEATURES

- ▶ Thickness from 1mm to 40mm
- ▶ Lightweight
- ▶ Water resistant
- ▶ High impact strength
- ▶ Abrasion & chemical resistant
- ▶ Protection against 9mm, .44 Magnum & 2xDM51 Grenade
- ▶ Excellent fragment protection
- ▶ Ballistic certification provided
