

FEATURES

- ▶ Thickness 1mm to 40mm
- ▶ Lightweight
- ▶ Water resistant
- ▶ High impact strength
- ▶ Abrasion & chemical resistant
- ▶ Protection against 9mm, .44 Magnum & 2xDM51 Grenade
- ▶ Excellent fragment protection
- ▶ Ballistic certification provided

LEGION ARAMID (AFS)

ASL GRP's Legion Aramid, or Aramid Flat Sheet Armour (AFS), are designed to protect property and personnel from ballistic attack.

Aramid is a lower cost alternative to Polyethylene panels and are lighter than mild steel or GRP Armour.

AFS Armour is predominately used for the manufacturing of Ballistic Spall Liners.

ASL GRP Spall Liners are mounted on the inside of a vehicle (see right) or structure and are designed to encapsulate the impacting

projectile through controlled de-lamination and energy absorption, thereby eliminating the typical ricochet that is inherent in hardened steel armours.

The standard panel size is 3000 x 2000mm but larger panels can be accommodated.
